TO-DO LIST

Batch Code : 3FSD1

Start Date : September 15th, 2025

End Date : September 28th, 2025

Name of Faculty : Dimas Yudha Prawira, S.Kom, M.Kom

Names of Developer :

1. Namira Assalwa Zulfarida

Date of Submission: September 28th, 2025

ACKNOWLEDGEMENT

First of all, we would like to express our deepest gratitude to God Almighty for His blessings and guidance, which have enabled us to successfully complete our group project entitled “To-Do List”.

We would also like to express our sincere gratitude to our lecturer, Dimas Yudha Prawira, S.Kom, M.Kom, for his valuable support, insightful input, and continuous encouragement during the development of this project. His guidance was instrumental in helping us understand the concepts and implementation of UI/UX design in creating a practical to-do list application using Figma.

Our team also thanks all our group members, Zulfarida and Namira Assalwa, for their cooperation, dedication, and collaborative efforts. Each member played a crucial role in completing this project, from designing wireframes and creating interactive prototypes to writing and presenting the final paper.

Last but not least, our group appreciates the learning resources and documentation provided by Figma and other online platforms that helped us overcome design challenges during the project.

We hope this paper and the Figma To-Do List project can contribute positively to our learning journey and serve as a reference for future UI/UX design and application development work.

PERSONA

1. Name : Budhi Setyawan
    a. Biggest Challenge: Managing commitments
    b. Current Tool: Microsoft To-Do List
    c. Needs & Goals:
        - Wants to record daily, weekly, monthly tasks
        - Needs reminders (email, alarm, push notification)
        - Prefers simple task lists with priorities (Big/Small/Key tasks)
        - Wants to track progress with a progress bar
        - Wants integration with other apps
    d. Pain Points:
        - Limited interface customization
        - Too standard-looking layout
2. Name : Ilham Fajri
    a. Biggest Challenge: Piling tasks
    b. Current Tool: Notion
    c. Needs & Goals:
        - Visualize tasks in different formats (lists, calendar, Kanban board)
        - Needs push notifications
        - Wants task-sharing and collaboration features
        - Values task properties
    d. Pain Points: Notifications are too weak
3. Name : Nadia
    a. Biggest Challenge: Forgetting tasks
    b. Current Tool: Reminder app
    c. Needs & Goals:
        - Strong push notifications
        - Simple task lists
        - Task-sharing and collaboration
        - Checklist-based task tracking
    d. Pain Points: Has difficulty managing time without external help

DESIGN METHOD

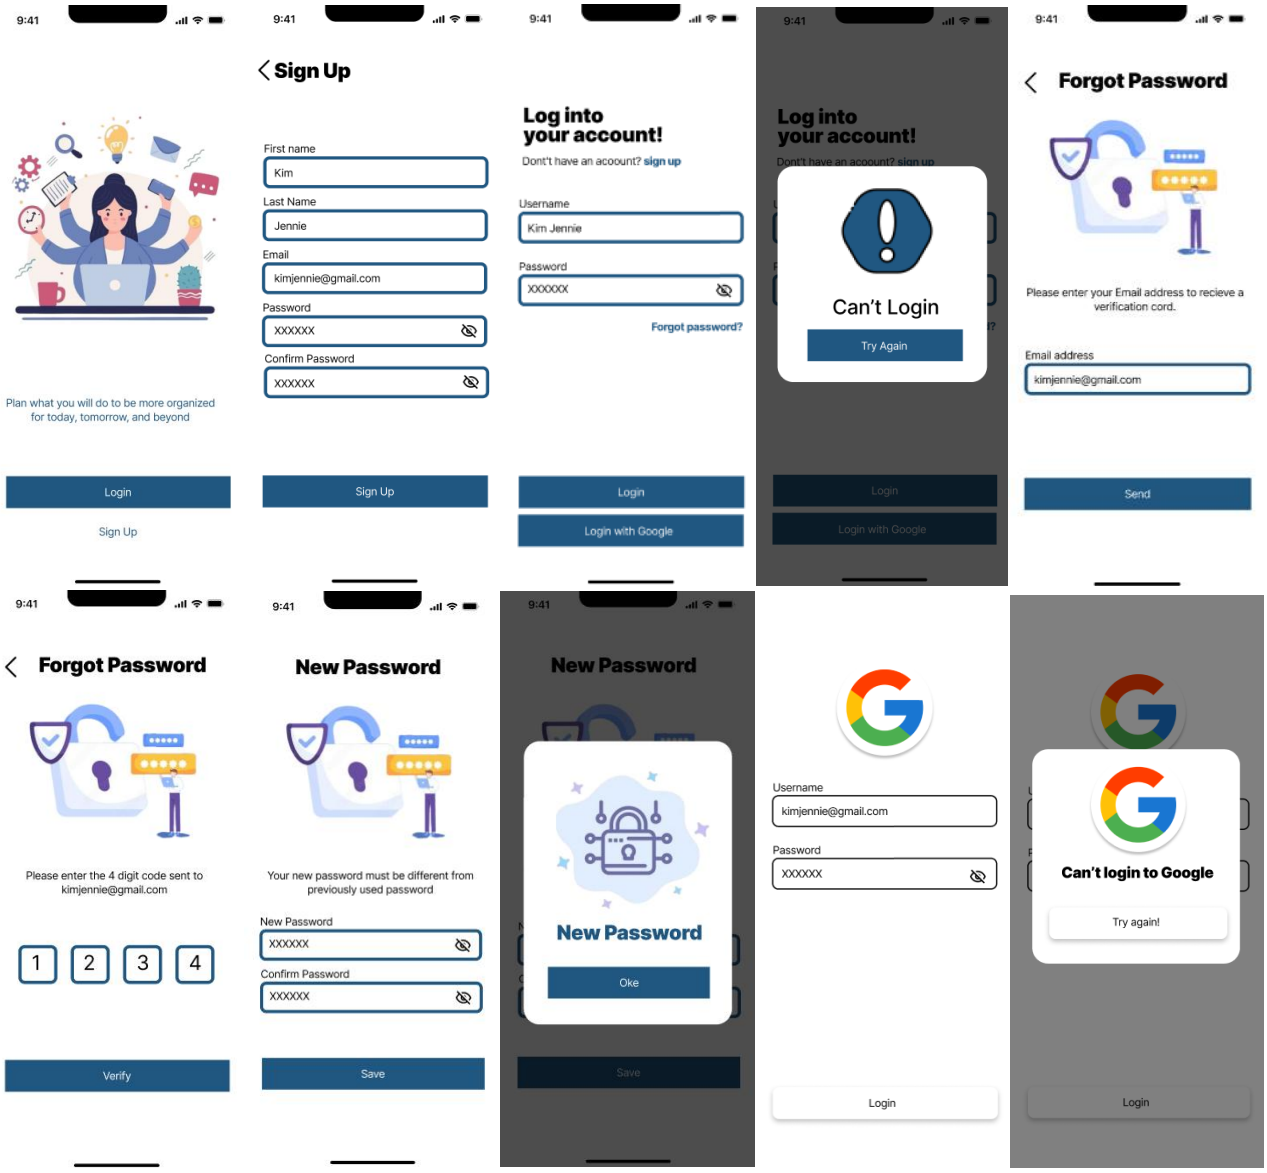

10 Usability Heuristics for User Interface Design

1. Visibility of System Status
   The app should provide clear feedback when tasks are added and completed (checkmark animation).
2. Match Between System and the Real World
   Use familiar terms like “task,” instead of technical jargon. Represent tasks in a checklist format, similar to real-life to-do notes.
3. User Control and Freedom
   Allow users to undo/redo deleted tasks. Provide options to easily edit task details without being stuck.
4. Consistency and Standards
   Maintain consistent colors, icons, and button placement on every screen (the “+” button for adding tasks is always in the same place). Use standard symbols (checkmark for completed).
5. Error Prevention
   Add confirmation before deleting a task.
6. Recognition Rather Than Recall
   Display task categories and reminders clearly so users don’t have to memorize them. Provide a visible calendar or filters instead of requiring manual searches.
7. Flexibility and Efficiency of Use
   Provide drag-and-drop to reorder tasks.
8. Aesthetic and Minimalist Design
   Avoid clutter — show only important information (task name, deadline, reminder).
9. Help Users Recognize, Diagnose, and Recover from Errors
   Hide advanced options in expandable menus. Provide clear error messages such as “Can’t Login,” instead of vague alerts.
10. Help and Documentation
    Offer a short tutorial when users open the app for the first time.
